

Solutions for EMS

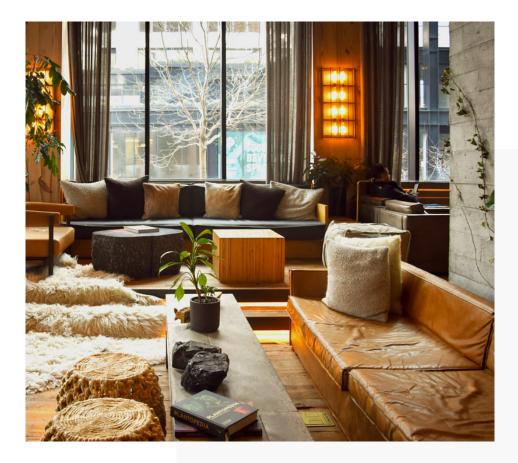

Smart technologies to achieve sustainability goals

The VDA-Telkonet Group is **the largest global player** in the field of EMS and GRMS for the world Hospitality market. The Group defines the future of the sector by focusing on People as a valuable element of smart technologies and by offering the right balance between maximizing comfort and saving energy.

The Group is the global leader in IoT Hospitality technologies. As **the industry's leading solution provider**, the Group's experience in the service and support of its customers benefits them in all phases of their projects, f rom consulting to engineering, to delivery and ongoing support of the completed project.

With over 1 million rooms installed in 62 countries and **more than 60 years of experience** and three in-house R&D Teams of around 40 engineers with hardware and software expertise, the Group demonstrates a deep knowledge of the markets in which it operates and is a **strategic partner** for the global Hospitality market.

About us

The Group has obtained the **'ISO 9001' certification** as an international recognition for the quality

of the products and services offered, adopting a management system compliant with UNI EN ISO 9001:2015 in order to improve and streamline its processes.

The adoption of **ethical behaviours** is

a fundamental value for the Group, which regards regulatory compliance as a minimum standard from which to develop responsible behaviours. To this end, the Group has adopted the 'Code of Ethics' that guides its work and promotes a culture based on the principles of fairness, loyalty, and transparency.

presence

All VDA and Telkonet products, largely assembled at the production sites, are verified by **internal Quality Control** that establishes compliance with regulatory standards.

The ISO 9001 certified Group has adopted precise quality standards for processes and products, such that the Group can provide both standard and customized products; the development guidelines are well defined in order to maintain the quality of the product, even with significant customizations.

Ensuring the quality of the product and the service offered is a priority for the Group, which bases its philosophy on the ability to **satisfy the customer** and adapt to changing market contexts.

The Group's Quality

Our Markets

Hospitality	3-5 star hotels strive to strike the right balance between energy savings and guest comfort. Sustainability is the most popular trend in the travel industry today.
Student Housing	Sustainability is so important that many institutions have sustainability directors; many universities now offer sustainability as an area of study. Saving energy and occupant comfort are also important.
MDU	MDUs are interested in saving energy and maintaining ultimate control of energy usage; sustainability is becoming a priority as building standards change and as tenants increasingly demand it.
Military Housing	Military housing properties are primarily interested in saving energy and maintaining ultimate control of energy usage. Sustainability is becoming a priority as building standards change.
Senior Living Facilities	Senior living facilities are most interested in saving energy but not at the expense of occupant comfort. Sustainability is becoming a priority as building standards change.

Solution provider

KNOW HOW

Customer satisfaction is the Group's driving force and lifeblood.

The Group's deep knowledge of the industry is evident in its valued relationships in the Hospitality sector. The Group understands the needs of the market and establishes strong relationships with its customers.

The Group is driven by its '**People first**' philosophy. One of its main goals is to cultivate the relationship between the individual and the surrounding environment.

PRE-SALES

The Group's support starts from the presales stage, offering **consulting services**. We seek to understand the client's vision, acting as a trusted advisor and offering perspectives the client may not have considered. The Group develops **customized proposals**, outlining in detail the system to be installed, and suggesting the appropriate aesthetics.

PROJECT MANAGER

The installation phase of the project is entrusted to the **Project Manager**, who supports the customer in the set up and commissioning of the site, and acts as a liaison between the Project Engineer and the project stakeholders. The Project Manager commits to the client the supervision and the management of every phase of the project development, actively involved until final installation and providing detailed documentation to be used as a guide to support and develop the property for years to come.

3

TECHNICAL SUPPORT TEAM

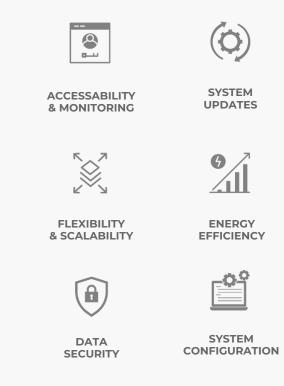

The **Technical Support Team** specializes in providing our customers with individual attention. They are an experienced, knowledgeable **group of professionals,** most of whom are located in the very same office as our Engineers, Product Development Engineers, Project Managers and Field Services Technicians.

Software service

Cloud solutions are now a consolidated reality in the world of Hospitality and more and more properties choose platforms capable of offering a software service (SaaS: Software-as-a-Service) able to evolve in harmony with the technologies of the future. One of the main advantages of the Internet of Things (IoT) is its ability to manage big data and parse it into information that is the basis for data analysis aimed at improving a variety of processes.

Predictive maintenance specifically exploits this data, anticipating and developing targeted interventions in advance of problems. This contributes to a significant reduction in maintenance costs and downtime, making it an investment that maximizes the life of devices and equipment and building health.

Telkonet, headquartered in Waukesha, Wisconsin, is an IoT innovator focused on **intelligent automation** and **Energy Management** through the use of individualized climate controls that enable guests to intelligently control energy usage in accordance with their preferences while reducing energy consumption and improving facility management capabilities.

Telkonet was founded in 1999 and has successfully deployed **over 700,000 intelligent climate control devices** across more than 4,000 properties.

Energy Management System

Rhapsody

The second-generation loT platform

Rhapsody is Telkonet's second generation automation platform.

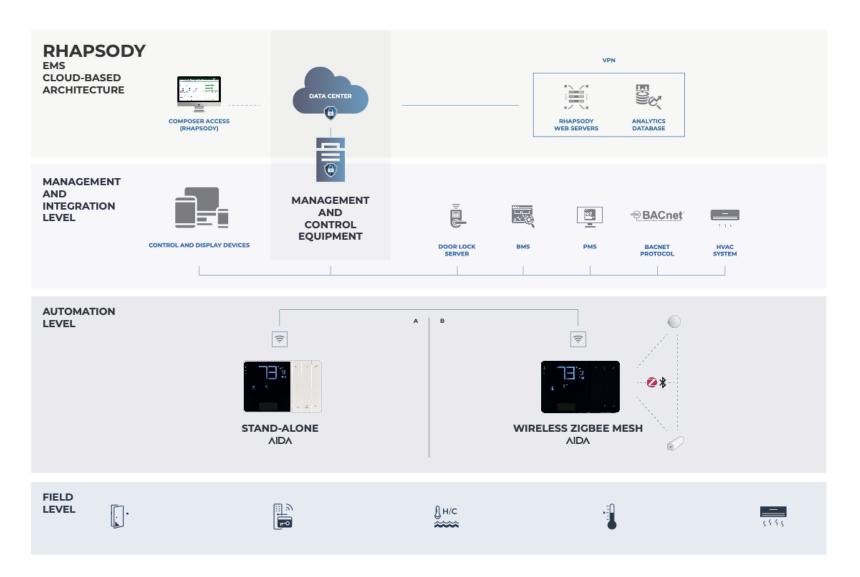

Its innovative open-system technology enables it to integrate with the communication protocols your property already uses: Wi-Fi, Bluetooth, and Zigbee. System setup and network installation are quick and easy. And because it's Wi-Fi capable, it saves time, effort, and expense by using existing Wi-Fi access points.

No other technology in the industry is capable of utilizing two different Wi-Fi platforms: one for the resident, and a backup Wi-Fi for the property.

*

Rhapsody

WEB BASED USER INTERFACE

Telkonet's flexible Rhapsody offering provides several different methods of access. From physical interface with in-room devices to mobile applications, cloud-based software and publicly available API's, customers are able to choose the most convenient method of controlling their valuable environments.

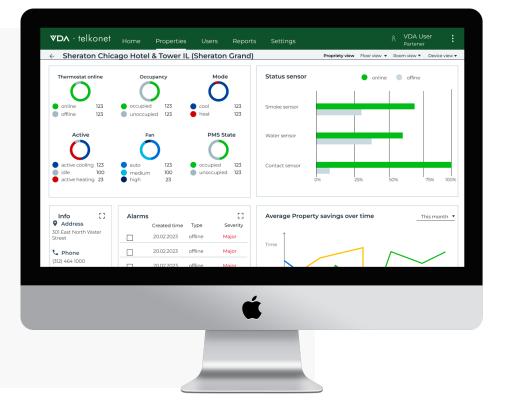

Rhapsody

SOFTWARE CAPABILITIES

- Flexible device management
- Real-time information access
- Extensive reporting capabilities
- Convenient 'single pane of glass' access
- Versatile viewing options
- Substantial ROI through platform maintenance

Why Rhapsody

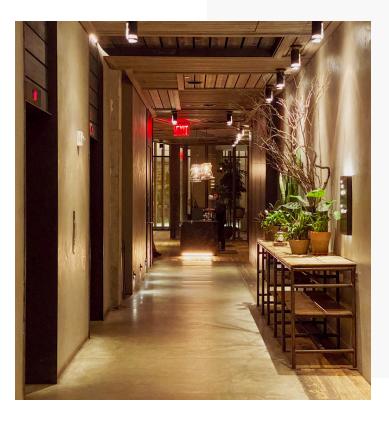

Rhapsody software features multi-site viewing from a single platform, user-friendly graphics, and powerful analytics. There is a Rhapsody thermostat for practically every scenario, from thermostat retrofits, to smaller PTACs, to customizable button options.

Third party integrations fit right into the Rhapsody platform: PMS, BMS, door locks and more.

Rhapsody

SETUP AND CONFIGURATION TOOLS

Student housing, MDU's, and Hotels are prime candidates for Rhapsody.

Use exisiting Wi-Fi access points for networking the platform, saving on both parts and labor. Using the ubiquitous Zigbee protocol, the platform tracks occupancy for energy savings and integrates with lighting, panic buttons, and door contacts.

Guests appreciate using their mobile devices for thermostat control and for customizing schedules, using Bluetooth plus their Wi-Fi; property Wi-Fi can also be used, either in lieu of residential Wi-Fi or when residents move out.

Collections

Rhapsody

Touch Combo Aida

Touch Combo

The cutting-edge smart thermostat, Telkonet's Touch Combo features the three most common wireless communication protocols, Wi-Fi, Bluetooth, and Zigbee, all in one device.

Touch Combo

Building owners can control thermostats and the energy use in the building, while at the same time giving their tenants the ability to control their thermostats with their own Wi-Fi via their mobile devices. No other platform today is capable of offering this.

Touch Combo

Touch Combo is designed for energy efficiency at university housing, senior living, and multi-family facilities.

Essentially all managed housing that have already invested in robust Wi-Fi infrastructure.

Aida

The next generation of Telkonet smart thermostats, Aida is an HVAC controller and user interface in one device. It features a user-friendly interface that all occupants can easily interact with.

Aida

Property owners can control thermostats and the energy use in the building, while also giving their tenants the ability to control their thermostats through their own Wi-Fi via their mobile devices. No other platform today is capable of offering this solution.

Telkonet's Aida features the three most common wireless communication protocols, Wi-Fi, Bluetooth, and Zigbee, all in one device.

Aida

Aida is designed for energy efficiency at university housing, senior living, and multi-family facilities; essentially, all properties that already have a robust Wi-Fi infrastructure.

Light sensing also aids in accurate occupancy detection, especially at night.

Controller

Rhapsody

ES Controller

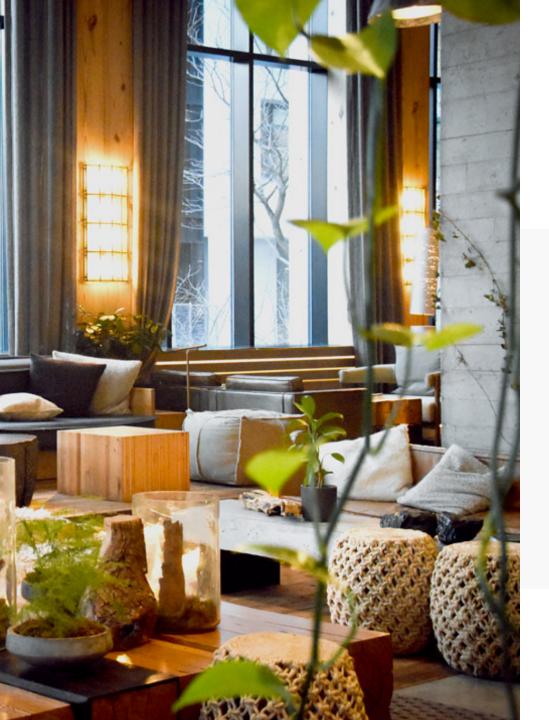

ES Controller

The ES Controller is part of the Rhapsody wireless thermostat package that offers flexible deployment options for many types of HVAC equipment.

The ES Controller communicates wirelessly with a remote display unit (Air BLE) and with the Rhapsody platform.

The ES Controller has a self-ranging power supply that allows it to be connected to a range of voltages without additional equipment.

Network

Rhapsody

Integration server

Integration server

A network edge appliance, required when properties choose on-premise interfaces. Interfaces include PMS, BACnet, or smart door locks. When the Integration Server is used, all Rhapsody devices will first communicate on a local network to the Integration Server.

The Integration server maintains a connection with the cloud to allow for reporting and control capabilities in the Rhapsody dashboard.

Accessories

Contact+

Sense+

Contact+

An effective solution for supplementing occupancy detection in large or multi-angular living spaces. Contact+ plays two important roles:

- 1. Supplements occupancy detection in large or multi-angular living spaces.
- 2. Proactively adjusts HVAC output when patio doors or windows are left open.

Sense+

Supplemental occupancy detection for exceptionally large or angular spaces and multi-room layouts. The Sense+ contains a PIR, which detects body temperature and motion. Our PIR sensors are optimized for use in spaces such as Hotel rooms and dormitories. They are calibrated to extreme sensitivity so they can detect even subtle motion.

Sense+ easily integrates with other third-party Zigbee devices.
